EDS Electric Detection Systems

Australian Security Fencing has taken perimeter security to the next level with its unique range of **EDS Electric Detection System** products. The **EDS** fencing system is one of the few perimeter systems largely developed and manufactured in Australia and is continually proving to be the most reliable and cost effective method for perimeter security. A standard **EDS** system is 2.7meters high consisting of 30 wires, a barrier that exceeds previous fencing systems. The compulsory warning signs and the systems' deterring appearance warns would-be intruders that there is a real risk of receiving a sharp regulated shock if deliberately touched, tampered with or climbed. The systems unique ability to monitor the fence line ensures reliable security of people and property.

Safety

EDS fencing systems are manufactured and installed to exceed strict Australian and International Standards as well as Australian Security Fencings' stringent Codes of Practice. Unique safety features are incorporated within the **EDS** control panels.

Technology

ASF continually consult with industry engineers to enhance the **EDS** microprocessors technology. The advanced processors can interface with most additional electronic security equipment. **EDS** controllers come with an optional keypad and can be fitted with a low voltage function to allow monitoring of the perimeter fence 24 hours a day.

SMS and RF technology allow the **EDS** fence processors to be located anywhere around the perimeter, reducing the need for costly cabling expenses. Realising the need for dependable Australian made products, ASF has established partnerships with organisations that specialise in the relevant fields.

Proven Security

Over the years, Electric Detection Systems have proved to be a reliable method of security in various industries such as:-

- Automotive, Transport, Marine & Caravan Yards
- Communication & Utility Sites
- Police & Emergency Services
- Distribution & Warehousing
- Mining & Manufacturing
- Government Institutions
- Correctional Facilities
- Defence Force Sites
- Auction Yards

Protecting your interests

Versatility & Reliability

The quick and easy to install **EDS** system can be fitted to almost any existing wall, roof or fence, or can be installed inside the boundary as a freestanding barrier. The systems' ability to monitor the fence line and to integrate multiple zones, allows for easier location of intrusion attempts for effective guard response. The system is generally extended 900mm above the existing fence or walls to provide an anti-climb section. The **EDS** system is unaffected by rain, wind, birds, and animals (most of which cause other systems to false alarm).

Low Cost of Ownership

The **EDS** fence system provides low cost of ownership due to the systems reliable performance, active deterrent value and minimal running costs (less than 40 watts when system is on). Many **EDS** system owners have reported recovering the cost of their **EDS** installation in a matter of months — this has been achieved by halting further crime to their premises and the reduction of other associated security and management costs.

Service

Clients investing in an **EDS** fencing system are assured a guaranteed high level of service, technical support and ongoing commitment. All **EDS** systems are offered with an approved maintenance program to ensure that your system is performing to its full capacity at all times. Being Australian made, all **EDS** components are readily available, ensuring that your security requirements should never be compromised. A 12 month warranty applies to all **EDS** system products. Authorised agents Australia-wide are trained in the installation and maintenance of the **EDS** system.

Gold Guarantee
An extended 2 year warranty
applies to all certified EDS
systems implementing approved
maintenance programmes.

About Australian Security Fencing

Australian Security Fencing was first established in 1988.

100's of Electric Detection Systems installed nationally, and 15 years experience in perimeter security has provided Australian Security Fencing's management and staff with an invaluable knowledge and ability to create a system that can deliver various levels of security, intimidation and detection.

Australian Security Fencing occupies a 14,000 sq ft manufacturing and warehousing facility in Riverstone, NSW. The premises house Research, Development and Testing facilities, imperative aspects when operating under the concept of producing high quality products and results that exceed client's expectations. It is this dedication and experience that make the **EDS** system the ultimate choice for your perimeter security.
