

Perimeter Security Products

U R Safe Pty Ltd Company Overview

U R Safe Pty Ltd is the leading provider of perimeter security throughout Australia with more than 28 years experience in the security industry. We know how important protection of your business and staff is against theft, vandalism, extortion and assault.

We specialise in designing Perimeter Security Systems for all types of businesses, with permanent or rental electric fencing, long or short terms available.

U R Safe only uses quality Australian made security products, used throughout the world for security perimeter fencing in commercial and industrial businesses, prisons, government infrastructures, car and boat yards, military facilities, high-risk terrorist target facilities and mine sites.

Our service is backed up by comprehensive technical support, ongoing customer service, maintenance programs which comply with Australian Standards at all times. All staff are registered with ASIAL (Australian Security Industry Association Ltd) and WA Police.

Perimeter Security Products

Permanent or Rental Electric Fence - EDS (Electric Detection System)

The EDS rental option is ideal for clients who need to secure heavy machinery and equipment at off-site locations to protect civil works, drainage, earthmoving and property development.

Electric fence, alarm system and GSM mobile phone dial out can be installed on powered or non-powered sites, using solar power.

We offer competitive prices and flexible rental agreements, with support and technical advice, reliable after care service and maintenance agreements.

How does Electric Security Monitored Fencing work?

Attaches to an existing perimeter fence, wall / roof or constructed as a stand-alone fence.

Strong visual and psychological deterrent with signs indicating the fence is pulse electrified and monitored by alarm.

Height of the electrified fence is a physical and psychological barrier.

A deterrent because an intruder will receive a short, sharp, safe electric shock, compelling them to release their hold involuntarily.

Security alarm activation should the intruder continue to penetrate the fence.

Security guard response to activated alarm.

How will it save me money?

Security Guard patrols may not be required, as the fence protects property 24/7.

No more theft or vandalism to property or equipment.

No more down time or inconvenience due to theft and vandalism to property.

Able to get insurance for property as there are fewer security concerns.

Reduction in insurance premiums and less claims.

ASF SABRA FENCE

This cutting edge technology includes multiple sensors along a perimeter fence which identifies intrusion attempts by sensing movement. The system can be installed onto any fence or perimeter structure and allows an operator to control and monitor each sensor along the fence line.

The Sabra transducers can detect vibration events, temperature, magnetic gate operation and security smart patrol. This security fence system effectively secures commercial, private, industrial and military sites.

RAZAR TAPE

Razar Tape/Wire

Razar Tape/Wire is designed to prevent intrusion along perimeter boundaries, confronting intruders with a visual deterrent from climbing and is difficult to cut.

It can be added to existing fencing and is available in flat loop and concertina in various sizes (galvanised or stainless steel)

It is suitable for any site that requires perimeter fencing, including industrial sites, depots, government utility sites, correctional centres and military compounds.

Croc Top Spiked Security Fencing

Croc Top is a low-cost security barrier option to deter intruders from climbing a fence. This spiked metal capping is easily fixed to the top of most fencing and can be added to bricks, colour bond, chain mesh fencing, masonry walls and gates.

It is available galvanised or powder coated to match existing fences.

Securemax

Securemax is widely used for its strength, appearance and its anti-climb profile. It is several times harder to cut and penetrate than other high security fences. A virtually see-through appearance enables it to blend into the surrounding environment.

It is suitable fencing for correctional facilities, hospitals, roads and bridges, power stations, factories, commercial and industrial compounds, ports, gas lines, railways, airports and walkways and can be used as factory machine guards, balustrade fencing and high security window grilles.

It is available in hot dipped galvanised and a range of powder coated colours.

Corromesh

Corromesh has no foot or hand holes and a spiked top to discourage climbing.

It is suitable for fencing parks, waterways, council depots, government water, electricity, gas and rail facilities, bridges, industrial developments and walkways. It can also be used as factory machine guards and balustrade security fencing.

It is available in a zinc alloy finish or a range of powder coated colour finishes.

Other U R Safe products

- Security Safes (Chubb, CMI, Guardall)
- Security Cameras, CCTV
- Monitoring of Security Alarms, CCTV
- Security Alarm Systems
- Electric / Solar Powered Automatic Gates
- Locks & Locking Devices
